

## Laptop Tips and Best Practices | Cleaning the Hardware

This is very important during this time as loaners and replacements are extremely limited.

1. Use a soft lint-free cloth to wipe the screen. To avoid damage, do not press very hard on the screen.

2. If the screen is very dirty, you can dampen the cloth a bit, but you should wipe the screen with a dry cloth immediately afterwards.

3. The same technique applies to keyboards and touchpads, but only use a dry cloth because water can get through the crevices and cause damage.

4. When cleaning the top or bottom cover, you can use a Clorox/Lysol wipe or damp cloth.

5. Above all else, be gentle when cleaning your computer. No power washing!  
😊
